PROFESSIONAL SUMMARY

Result-driven Mobile & Frontend Engineer with 5 years of experience building, scaling, and deploying production-grade cross-platform applications using Flutter, Dart, and React Native. Recognized Upwork Rising Talent with a 100% Job Success Score, demonstrating zero-month gaps and a history of high-velocity delivery for global clients. Expert in Flutter architecture (Riverpod, BLoC), offline-first synchronization, real-time systems, and native iOS/Android deployment. Adept at leading end-to-end product lifecycles, translating complex business logic into scalable code, and collaborating with international founders.

TECHNICAL SKILLS

- Mobile Development: Flutter, Dart, React Native, Swift (iOS Essentials)
- Frontend Engineering: React.js, Angular, JavaScript (ES6+), HTML5, CSS3
- Backend & Database: Firebase (Firestore, Cloud Functions), Node.js, Django, MongoDB, RESTful APIs
- Flutter & Architecture: Riverpod, GoRouter, Clean Architecture, Offline-first Sync, Pagination, BLE Beacons
- Mobile Ecosystem: App Store Connect, TestFlight, Google Play Console, CI/CD, Push Notifications, Dynamic Links
- Tools & Methodologies: Git/GitHub, Figma, Jira, Agile/Scrum, Trello, Notion

PROFESSIONAL EXPERIENCE

Senior Mobile Application Consultant & Lead Engineer

Upwork Engineering Partner / Remote | 2021 – Present

- Built a premier independent engineering practice, earning the Upwork Rising Talent Badge, generating \$10k+ in revenue, maintaining a 100% Job Success Score, and securing 10 consecutive 5-star project ratings with zero months of bench-time.
- Architected, developed, and successfully deployed 7 production-grade cross-platform applications for international clients across enterprise, healthcare, navigation, and social sectors.
- Engineered a highly reusable, configuration-based core architecture that successfully powers both a high-traffic mall rewards application (Waya Waya) and a complex campus navigation system (UJ WayFinder), cutting development time for subsequent clients by 40%.
- Designed an offline-first data sync architecture using local caching and RESTful APIs, ensuring uninterrupted application performance in low-connectivity environments.
- Spearheaded a critical codebase migration from low-code FlutterFlow to a scalable, production-ready Flutter/Riverpod architecture for Woopdo, optimizing infinite scrolling performance and memory

footprint.

- Managed complete iOS release cycles, configuring provisioning profiles, TestFlight betas, and navigating strict App Store Review guidelines to ensure 100% compliance.

Featured Production Implementations handled during this tenure:

- PURI (Software as a Medical Device - SaMD): Developed an iOS-focused healthcare mobile application designed for guided, clinical urinalysis workflows. Implemented strict diagnostic data handling architectures, compliance-ready onboarding, and localized subscription management models.
- OSAC GMS (Garage Management System): Solely developed an enterprise-grade web and mobile platform for automotive service centers. Implemented multi-role dashboards, automated quotations/invoicing workflows, and automated technician task tracking utilizing Riverpod and GoRouter.
- Waya Waya Mall App: Lead developer for a consumer rewards app used across major shopping malls in South Africa. Integrated location-based rewards, secure voucher redemption flows, and real-time store offer management.
- UJ WayFinder: Engineered an indoor university navigation system utilizing Bluetooth Low Energy (BLE) Beacons, custom map rendering, and real-time proximity-based route guidance.
- Safe Again: Built a real-time women's safety application featuring low-latency emergency signaling, encrypted peer-to-peer chats, location-based safety feeds, and scalable Firestore models.

Associate Software Engineer (L1)

Chirpn IT Solutions · India | Jan 2021 – Jun 2022

- Developed cross-platform mobile features and modern web frontends using Flutter, React Native, and React.js within fast-paced Agile sprint teams.
- Created a library of highly reusable UI components according to strict Figma mockups, standardizing style guides and improving frontend feature-delivery velocity by 25%.
- Profiled app performance to isolate and resolve UI rendering bottlenecks, reducing frame drops and optimizing memory usage on legacy Android devices.
- Key Projects Contributed to: *Mobiurja* (a logistics-heavy fuel delivery application), *Social Share* (a high-traffic Linktree-style landing page engine), and *Sportly* (a sports engagement mobile app).

EDUCATION

- Bachelor of Computer Science (B.C.S.) | *First Class* Dr. D. Y. Patil University | 2017 – 2020
- Senior Secondary (XII) · Science S.N.B.P International School & Jr. College | *Class of 2017*

ADDITIONAL CREDENTIALS & CAPABILITIES

- Upwork Metrics: Verified Rising Talent Status | 100% Client Satisfaction Score | 10 Fully Completed 5-Star Contracts.
- Global Collaboration: Experienced working seamlessly across diverse time zones with distributed international teams and technical/non-technical startup founders.
- Product Ownership: Comfortable managing applications end-to-end, from technical scoping, system design, and database modeling to post-launch optimization.
