Professional Summary

Product-focused Mobile and Frontend Developer with **5 years of total experience**, including **1.5 years of full-time product development** and **3.5+ years as an independent freelancer**, delivering real-world applications actively used by customers. Experienced in **end-to-end app ownership** — from UI/UX and development to App Store deployment, compliance, and post-launch support. Comfortable taking full responsibility for a product and scaling it in production.

Core Skills

- **Primary Stack:** Flutter & Dart & javascript
- **Mobile:** Flutter (iOS & Android), React Native
- **Frontend:** React.js, Angular (problem-solving & legacy fixes)
- **Backend:** Node.js, Django
- **Databases:** MongoDB
- **Backend Services:** Firebase, REST APIs, Authentication, Cloud Storage, Dynamic links, Messaging.
- **iOS Expertise:** App Store deployment, TestFlight, certificates, provisioning profiles, App Store review guidelines
- **Tools & Workflow:** Git, GitHub, CI/CD basics, Figma, Jira, Trello, Notion.
- **Strengths:** Product ownership, system thinking, client communication, requirement analysis

Professional Experience

Senior Freelance Mobile App Developer

Independent | Remote

Duration: 2021 – Present

- Led **4 production mobile applications**, all currently live and maintained.
- Acted as **sole technical owner** for multiple products — responsible for architecture, UI/UX implementation, development, testing, deployment, and long-term maintenance.
- Built scalable cross-platform apps using **Flutter & Dart**, with strong emphasis on iOS performance and App Store compliance.
- Successfully deployed and maintained apps on the **Apple App Store**, handling certificates, provisioning profiles, TestFlight releases, and review feedback.

- Three applications have **notable active user bases**, supporting real business operations and customer workflows.
- Worked directly with founders and stakeholders, translating business requirements into reliable production systems.

Live / Shipped Applications (Selected): -

OSAC GMS – Garage Management System | Flutter | Under active development

Waya Waya Mall App – Rewards & Mall Discovery App | Flutter | Live & maintained

UJ WayFinder – University Navigation App | Flutter | Live & maintained

Safe Again – Women Safety Application | Flutter | Live

Meal Tracker – Nutrition & Macro Tracking App | Flutter | Live

Woopdo – Activity-driven Social Media App | Flutter | Paused

PURI (Urinalysis App) – HealthTech Mobile App | Flutter | Retired

Associate Software Engineer (Level 1)

Chirpn IT Solutions | India

Duration: Jan 2021 – Jun 2022 (1.5 years)

Worked across multiple consumer and business applications as part of a product team, contributing to mobile and frontend development using **React, React Native, and Flutter**.

Key Contributions & Projects: -

Mobiurja – Petrol Delivery Application: - Contributed to frontend and mobile features for an on-demand fuel delivery platform. - Worked on user flows, dashboards, and performance-oriented UI components.

Social Share (Linktree-like Application):

Developed frontend components for a social profile aggregation app.

Implemented responsive UI and user interaction flows.

Sportly – Sports Application:

Built and maintained features for a sports-focused mobile application.

Worked closely with designers and backend developers to ship production releases.

Responsibilities: - Developed reusable UI components and screens across web and mobile. - Fixed bugs, optimized performance, and implemented new features. - Collaborated in an agile team environment with structured code reviews and release cycles.

App Store Experience (Highlight Section)

- **4 live mobile applications** currently running in production.
- Strong hands-on experience with:
 - Apple App Store Connect
 - TestFlight beta distribution
 - Certificates, provisioning profiles, and bundle identifiers

- App Store review process and long-term maintenance

Selected Projects

OSAC GMS – Garage Management System

Timeline: Aug 2025 – Present

Platform: Flutter (Web-first, iOS & Android compatible)

Role: Sole Developer & Technical Owner

A full-scale garage management system designed to handle end-to-end operations for automotive service centers. Built and maintained entirely in **Flutter** with a scalable, modular architecture.

Modules & Responsibilities: - **Sales Module:** - Create and manage quotations, invoices, and job cards linked to vehicle registration numbers (VRM). - Designed and implemented **multiple interlinked workflows** for sales operations. - Task diary allowing sales staff to assign jobs to technicians based on **available resources (ramps)**. - Customer communication and real-time job status updates.

- **Technician Module:**
 - Dashboard showing assigned jobs and priorities.
 - Technician check-in / check-out, lunch breaks, and **time tracking per task**.
 - Centralized access to all job-related information required for task execution.
- **Admin Module:**
 - Configuration and management of staff, technicians, working hours, inventory, and workshop resources.
 - Profile and task templates to enable rapid job creation and operational consistency.
- **Finance Module:**
 - Currently under active development.

Technical Highlights: - Built using **Flutter & Dart** with clean, scalable architecture. - **Riverpod** for robust state management. - **GoRouter** for structured and maintainable navigation. - Designed for long-term maintainability and multi-role access control.

Status: Under active development (pre-production), long-term product build.

Waya Waya – Mall Rewards & Discovery Application

Timeline: Nov 2021 – Present

Platform: Flutter (iOS & Android)

Role: Lead Mobile Developer

A consumer-facing mall discovery and rewards application used across multiple malls in South Africa.

Key Features & Responsibilities: - Built authentication and mall selection flows. - Displayed malls, stores, and live offers across regions. - Implemented **offline-first functionality** using local SQL storage. - Designed and implemented a **location-based rewards system** where users earn points upon entering malls. - Enabled reward redemption through vouchers for partnered stores.

Technical Highlights: - Flutter & Dart with shared scalable architecture. - Offline sync with SQL + remote

data. - Location-based logic and reward systems.

Status: Live and actively maintained.

UJ WayFinder – University Navigation Application

Timeline: Nov 2021 – Present

Platform: Flutter (iOS & Android)

Role: Lead Mobile Developer

A navigation and wayfinding application designed to help students navigate university campuses across South Africa.

Key Features & Responsibilities: - Built college/university selection flows. - Integrated **maps and route visualization** within the app. - Implemented **BLE Beacon integration** to detect proximity and guide users accurately indoors. - Shared a common codebase with Waya Waya, optimized through configuration-based differences.

Technical Highlights: - Flutter with BLE and location services. - Map rendering and indoor navigation logic.

Status: Live and actively maintained.

Safe Again – Women Safety Application

Timeline: Mid 2023 – Mid 2025

Platform: Flutter (iOS & Android)

Backend: Firebase

Role: Lead Developer

A real-time women safety and community assistance application designed to help users quickly reach nearby verified users during emergency situations.

Key Features & Responsibilities:

- Designed and developed complete **authentication and onboarding flows**.
- Built a **real-time emergency signal system** allowing users to broadcast distress signals to nearby verified users.
- Implemented **signal acceptance flows**, automatically creating private signal groups between matched users.
- Maintained **signal history tracking** for accountability and follow-ups.
- Developed a **community module** where users can create posts, interact, and message each other.
- Implemented **location-based filtering** to surface nearby community posts and users.
- Designed separate Firebase collections for **signals, chats, community posts, and user data** to ensure scalability and clean data separation.
- Integrated **push notifications** for emergency alerts, signal updates, and community interactions.

Technical Highlights:

- Flutter & Dart with production-grade Firebase architecture.
- Real-time database interactions and Firestore data modeling.
- Location-aware queries for safety-focused use cases.

Status: Live and maintained.

Education

Bachelor of Computer Science (B.C.S.)

Dr. D. Y. Patil University | First Class | 2017 – 2020

Senior Secondary (XII), Science

S.N.B.P International School & Jr. College | Class of 2017

Additional Information

- Comfortable working independently and taking ownership of products
- Experience working with international clients
- Strong communication and problem-solving skills
